- Exercise

Linking state management with networking: simplified schema

WHAT

“Event” that asks to
fetch data

Create request and get
the response

“Manage” response

Trigger the builders

Rebuild the UI

WHERE

Everywhere in your application

In a class dedicated to communicate
with IMPACT

In the provider (the class that is
extending `ChangeNotifier`)

In the provider (the class that is
extending `ChangeNotifier`)

Everywhere in your application
(where needed)

HOW

Many options, e.g., using a button,
automatically done if something
happen...

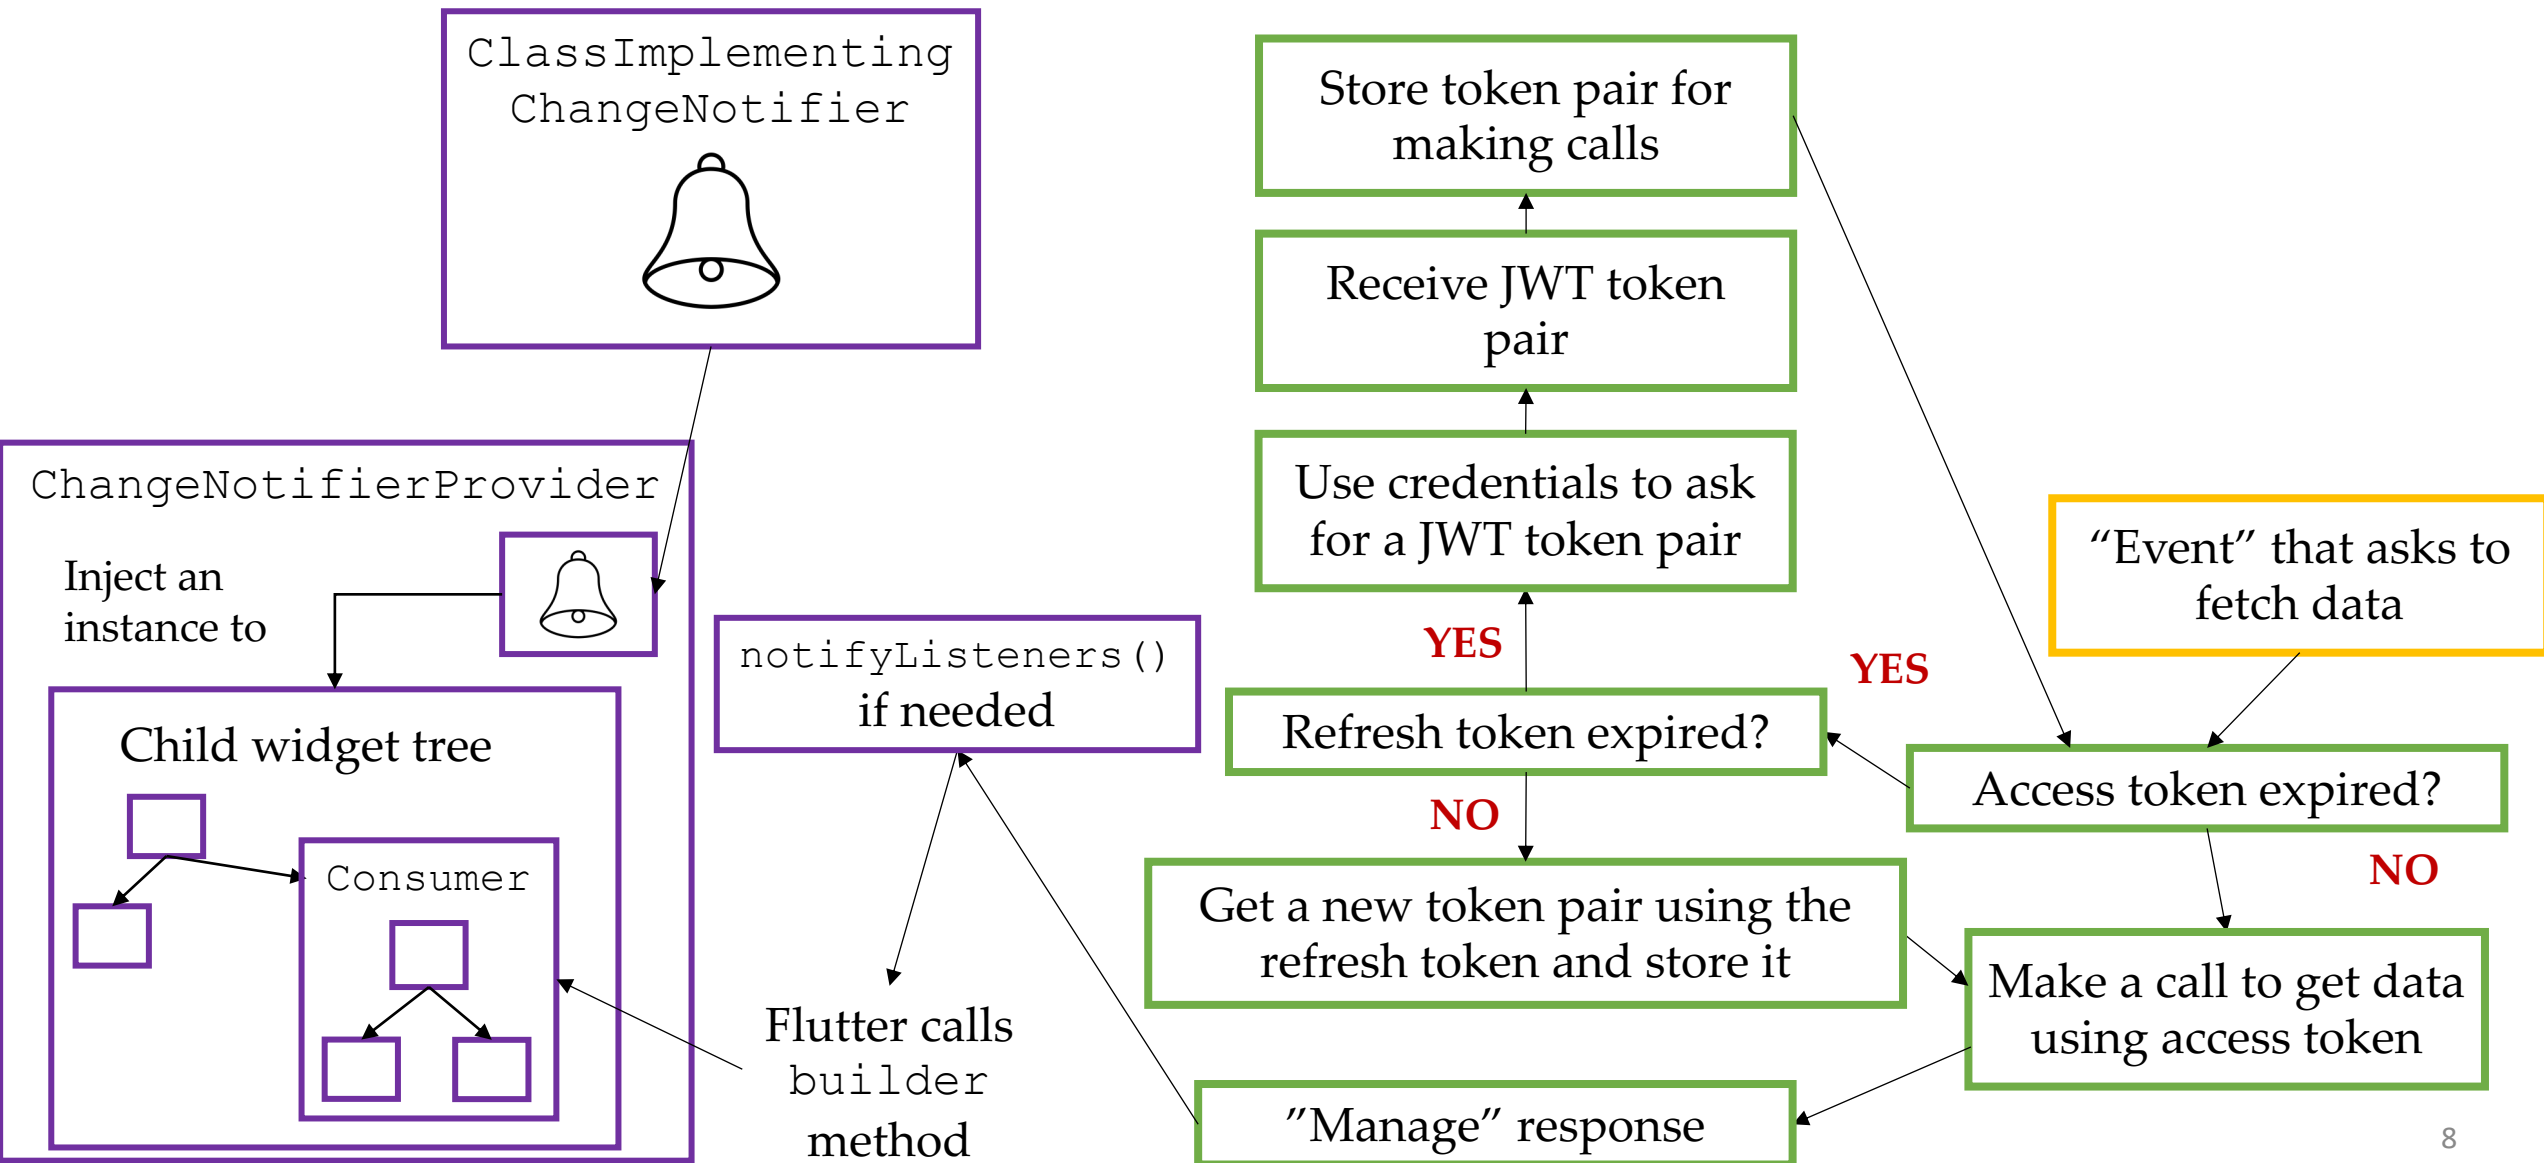

<See lesson 9 and 10>

<See lesson 9 and 10>

Calling `notifyListeners()`

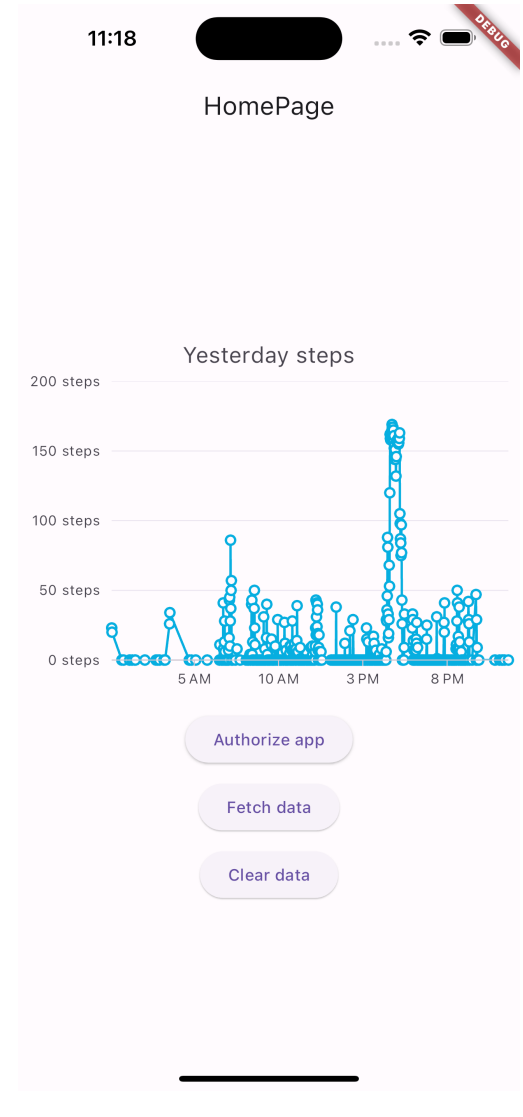

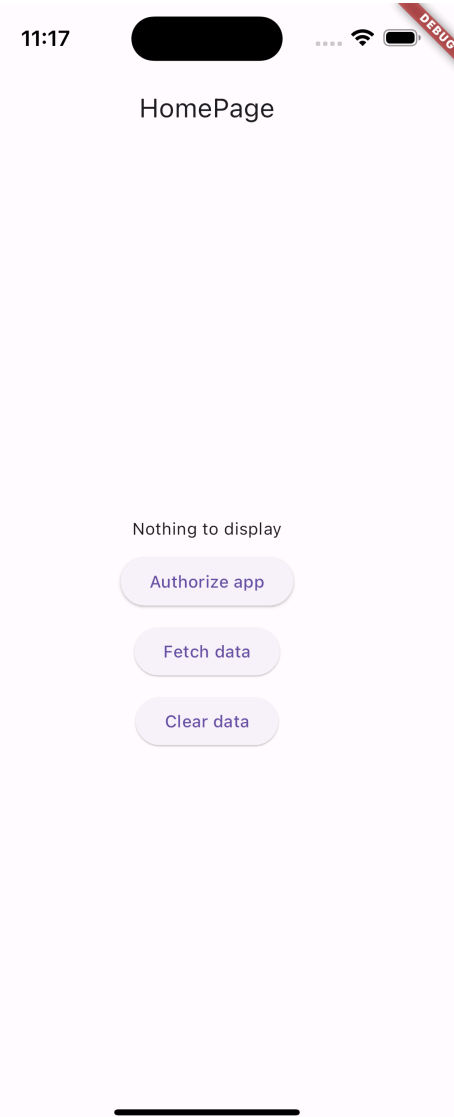

Using `Consumer`

Linking state management with networking: detailed schema

Case of study - Live

- Let's implement a simple application that, after tapping a button, generates a plot showing yesterday's steps.

Outline

- Recap
- Linking state management with networking
- **Exercise**

Exercise

- Get familiar with the example
